For my “cart” page, I wanted it to be easy for the users to navigate back to where they were as easily as they could go to the cart page. So, I added a back button icon which would allow users to go back to whatever page they accessed the cart from as well as the logo which would allow users to go back to the landing page. I wanted both options to be open for the user. When the item is added, the user would be able to see the image of what they purchased, the “name” of the order – the cinnamon bun flavor in this case, the quantity, the glazing on the left side and see the edit icon, “x” icon and the cost of that specific item on the right side. I wanted the user to be able to easily see their entire order, and be able to edit the item that they added into the bag as well as cancel it which is why each “order” would show up as a row, and the user would be able to scroll through it if to see each order and quickly get an idea of what they have in the bag, and take action on it.

Also, as a customer, I know I would appreciate knowing the cost of all my items together, so I made this clear by having the bottom “row” always displaying the total cost of my order. I placed the “Checkout” button to be at the bottom center, directly under the total, to indicate to the customer the total amount right before they would click the “Checkout” button.
